

54F/74F420 Parallel Check Bit/Syndrome Bit Generator

General Description

The 'F420 is a parallel check bit/syndrome bit generator. The 'F420 utilizes a modified hamming code to generate 7 check bits from a 32-bit dataword, in 15 ns, when operated in the check bit generate mode. When operated in the syndrome generate mode, the check bits and data bits

read from memory are utilized in a parity summer to generate syndrome bits upon error detection. The maximum error count detectable is 2. A single error detect can occur in 18 ns; a double error detect in 22 ns. The syndrome bit generation can be output in 15 ns (maximum).
