## General Description

The Supertex HV208 is a 220V 16-channel high-voltage analog switch integrated circuit (IC) configured as 2 sets of 8 single pole single throw analog switches. It is intended for use in applications requiring high voltage switching controlled by low voltage control signals such as ultrasound imaging and printers. The 2 sets of 8 analog switches are controlled by 2 input logic controls, $D_{\text {iN }} 1$ and $D_{\text {IN }} 2$. A logic high on $D_{\text {IN }} 1$ will turn $O N$ switches 0 to 7 and a logic high on $D_{1 \mathbb{N}} 2$ will turn $O N$ switches 8 to 15.

1 Power up/down sequence is arbitrary except GND must be powered-up first and powered-down last.
$2 \mathrm{~V}_{\text {SIG }}$ must be $\mathrm{V}_{\text {NN }} \leq \mathrm{V}_{\text {SIG }} \leq \mathrm{V}_{\mathrm{PP}}$ or floating during power up/down transition.
