

LA5614M

Charging IC for Nickel – Cadmium and Nickel Metal Hydride Batteries

Functions and Features

- Ideally suited for charging systems that use a microcontroller due to charge voltage detection.
- Cycle charge/trickle charge switching.
- Change current can be set with external resistor.

Package Dimensions

unit: mm

3086A-MFP10S

Specifications

Maximum Rating at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	$V_{CC \text{ max}}$		9	V
V_{CONT} input voltage	$V_{CONT \text{ max}}$		9	V
BIN pin voltage	$V_{BIN \text{ max}}$		9	V
ON/OFF pin voltage	$V_{ON/OFF \text{ max}}$		5	V
Allowable power dissipation	$P_d \text{ max}$	Independent IC	250	mW
Operating temperature	T_{opr}		-20 to +80	$^\circ\text{C}$
Storage temperature	T_{stg}		-30 to +125	$^\circ\text{C}$

Operating Conditions at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage	V_{CC}		6 ± 0.3	V
V_{CONT} voltage	V_{CONT}		6 ± 0.3	V
Base output current	I_{BASE}		0 to 14	mA
Trickle sink current	I_{SINK}		0 to 50	mA

■ Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.

■ SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

LA5614M

Electrical Characteristics at $T_a = 25^\circ\text{C}$, $V_{CC} = V_{CONT} = 6\text{ V}$ in specified test circuit

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Quiescent current	I_{CC}	$V_{CONT} = 0\text{ [V]}$			10	μA
Base output current	I_B		10	14	18	mA
V_{CONT} ON voltage	V_C		0.6	1.2	3.4	V
ON/OFF control OFF voltage	V_{OFF}			1.0	1.5	V
Trickle sink current	I_{SINK}	$V_{ON} = 0\text{ [V]}$, $27\ \Omega$ resistor between I_{TR} and GND $V_{BAT} = 4.2\text{ [V]}$		50	60	mA
[OUT pin block]						
Rise offset voltage	V_{OOS}		3.4	3.6	3.8	V
Output "L" level voltage	V_{OL}	$0\text{ V} \leq V_{BAT} < 3.6\text{ V}$	0	0.05	$0.1V_{CC}$	V
Output "H" level voltage	V_{OH}	$V_{BAT} = V_{CC}$	$0.8V_{CC}$		V_{CC}	V
Output gain	V_{OG}		8.0	9.5	11.0	dB

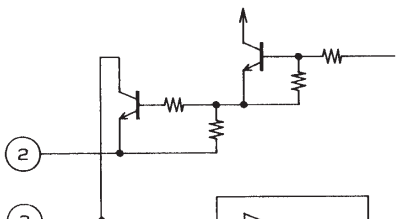

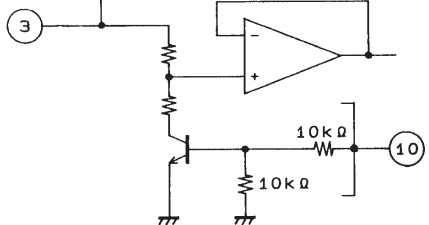

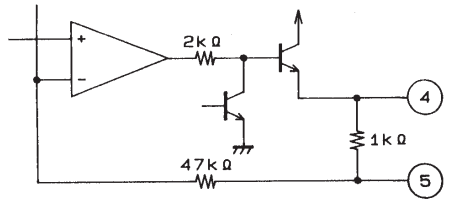

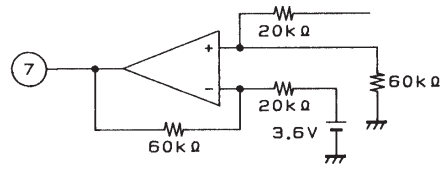

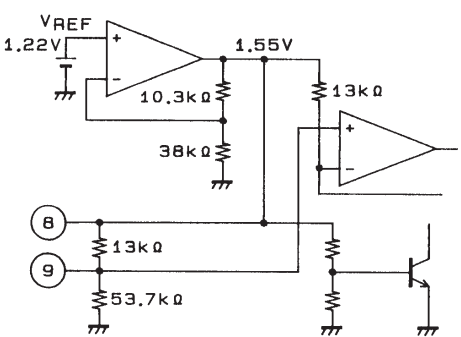

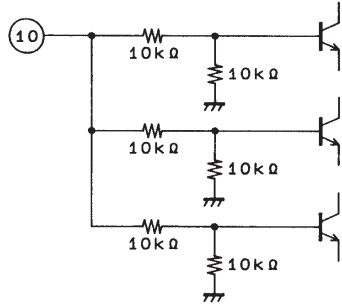

Pin Assignment

LA5614M

Pin Functions

Pin No.	Pin name	Function	Equivalent circuit
1	V _{CC}	External power supply pin	
2	I _{TR}	Trickle sink current setting pin Connect a resistor between GND and this pin	
3	B _{IN}	Secondary battery negative electrode and external NPN transistor collector connection pin	 A04615
4	Base	External NPN transistor base connection pin	 A04616
5	Emitter	External NPN transistor emitter and cycle charge current detection resistor connection pin	
6	GND	MIN. potential of this IC	
7	OUT	Charge voltage detection output pin Offset voltage: 3.6 V Output gain × 3 (when 3.6 V < V _{BAT} < V _{CC} , 3 Δ V _{BAT} is output)	 A04617
8	ON/OFF	Pin that switches between cycle charge and trickle charge Open: Cycle "L": Trickle	 A04618
9	I _{SET}	Pin for setting cycle charge current Connection of resistor between (9) and GND: Small charge current Connection of resistor between (9) and (8): Large charge current	
10	V _{CONT}	Pin that controls ON/OFF operation of this pin. "H": ON	 A04619

Application Cautions

The charging conditions of the secondary battery to be used must be set according to the battery specifications.

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Electric Co., Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.
